EDUCATION

Harvey Mudd College B.S. Computer Science and Mathematics

Aug 2021 – May 2025

EXPERIENCE

Software Engineer (Contract) *Rocamar – Remote*

Oct 2025 – Present

- Founded Corebit LLC to provide contract SWE services; led a full-stack engagement for a luxury hospitality client.
- Researched secure deployment pathways, including firewall configuration and DDoS mitigation strategies.
- Built a modular front-end using Vite and Tailwind, designing reusable templates for hotel and restaurant content.
- Implemented an authentication flow using Python, Flask and Jinja with credential validation and password hashing to support a protected admin panel. In which non-technical staff will be able to update room data and availability.
- Registered domain infrastructure and created professional email accounts in preparation for the hotel's opening.

Developer Internship *Planon – Nijmegen, Netherlands*

Jul 2024 – Aug 2024

- Designed a circuit for a table levelling program in order to correctly adjust tables by triggering the table motor using ultrasonic sensors for each given user's height.
- Replaced MQTT communication on an ESP 8266 Arduino module with an HTTPS protocol for secure GET requests.

Software Engineering Internship *Planon – Nijmegen, Netherlands*

Jun 2023 – Aug 2023

- Integrated internal navigation system using C# in Unity enabling users to locate meeting rooms with HoloLens2.
- Developed UI by adjusting shader values and trouble-shooting the voice-activated control feature for better accessibility on the menu screen, allowing users to be guided to their meeting room more easily.
- Diagnosed and resolved memory overflow issues in a malfunctioning car detection program, in time for it to be shown to potential investors.

Computer Science Tutor and Grader *Harvey Mudd College – Claremont, USA*

Aug 2023 – Dec 2023

- Provided one-on-one help to CS students by revisiting course concepts and using simplified examples to improve comprehension and confidence.
- Assisted with debugging problems and teaching the students how to write test cases to locate program issues efficiently and pragmatically to foster good coding habits.

PROJECTS

Wedding Planner App Development *DreamDai – Claremont, CA, USA*

Aug 2024 – May 2025

- Built a full-stack wedding planning web-app using React and Python, iterating on features based on bi-weekly client feedback from our low-fidelity prototypes.
- Acted as primary technical communicator during client presentations, explaining design tradeoffs and implementation decisions we took when presenting our new features during bi-weekly client meetings.
- Designed application architecture and data pipelines which gathered scraped vendor data, RegEx standardization before storing it in SupaBase.
- Enhanced search relevance using LLMs to generate embeddings stored in Pinecone's vector database from tags derived from scraped vendor descriptions.
- Presented final system architecture and functionality to academic and industry audiences, answering technical questions on system behavior.

SKILLS

- Python, C#, C++, Flask, React Vite, Tailwind, Unix/Linux command-line, Bash, Git
- Full-Stack Development, Algorithm Optimisation, Data Scraping, RegEx, Blender, Arduino
- Fluent in English, Spanish, French, Russian, Intermediate in German

RELEVANT COURSEWORK

- Scientific Computing, Network Algorithms, Algorithmic Art, Algorithms, Abstract Algebra
